Adherence Estimator® Results

Patient Name	NANCY SMART	Date Taken	Jun 11, 2019
Condition	Diabetes, Type 2	Medication	insulin isophane
Patient's Adherence Score:	6	Likelihood for Nonadherence:	MEDIUM

Likelihood for Nonadherence Key

- 8–36 High likelihood of nonadherence (less than 32% probability of adherence)
- 2–7 Medium likelihood of nonadherence (32%–75% probability of adherence)
- 0 Low likelihood of nonadherence (greater than 75% probability of adherence)

Results are based on patient responses to 3 statements about

- COMMITMENT (I am convinced of the importance of my prescription medication)
- CONCERN (I worry that my prescription medication will do more harm than good to me)
- COST (I feel financially burdened by my out-of-pocket expenses for my prescription medication)

The response to each of these statements is assigned a score. Likelihood of nonadherence is based on the sum of these scores.

Likelihood of Nonadherence Across the 3 Domains

COST **HIGH**

Statement

I feel financially burdened by my out-of-pocket expenses for my prescription medication

Patient Response

Agree completely

Suggested Conversation

Tell your patient to let you or his or her pharmacist

CONCERN **MEDIUM**

Statement

I worry that my prescription medication will do more harm than good to me

Patient Response

Disagree somewhat

Suggested Conversation

Ask your patient to discuss any concerns about his or

COMMITMENT **LOW**

Statement

I am convinced of the importance of my prescription medication

Patient Response

Agree completely

Suggested Conversation

Your patient understands the importance of taking prescription medication as
